Example: move not saved

The new order would make your fixed dinner unreachable. Your last saved plan is unchanged.

Proposed behavior: each move saves only after validation. Saving and failure messages stay beside the edited day.

05 No drag handle unless dragging actually works. 06 Locked bookings, failed moves and Undo remain obvious.

PROPOSED UX · 20 SEP 2026 · Synthetic names, dates and hours for layout only · Not a live application or usability result

All Trips · a useful list, not another introduction

Same compact header and tabs. Search and filters live directly above the trips.

Show more

07 Remove the stacked back link, Every trip heading and historical sentence. 08 Upcoming includes future drafts; planning status is a separate fact.

Mobile · visible response, fewer trips up and down the page

A focused place sheet replaces a panel that falls below the itinerary.

Selection should feel immediate.

Open details where the user is

Selecting a stop opens a bottom sheet. No scrolling past the entire day to find a changed panel.

Keep the useful actions in view

Place title, hours and Full details fit above the map. Close restores focus and the itinerary scroll position.

Preserve information on phones

All Trips rows retain dates and status. Use a two-line row instead of hiding those fields.

Motion rule

Short 160–200ms sheet and selection transitions. No repeated card entrances. Respect reduced motion.

Unknown stays unknown

“Hours unknown · Check on Google Maps” replaces invented hours. Unmatched places never link to a guessed branch.

09 Day controls stay in reach. 10 A dialog sheet keeps place details and the return path together.
